

Arsenal® Powerline

Herbicide

Control of non-native phragmites in non-aquatic environments.

- More consistent, longer-term control than other cultural and herbicide solutions
- Systemic activity targets shoots and roots
- No symptomology in year of application, so it does not displace established wildlife
- For use on roadsides and other non-aquatic environments

Best Management Practices.

- Must be applied by applicators licensed by the provincial Ministry of the Environment or other regulators
- **Do NOT apply if surface water is present**
- **Do NOT apply to ditches used for irrigation**
- Fall applications to green foliage are recommended for optimum control
- Ensure excellent coverage; increased water volumes may improve performance
 - » Minimum of 100 L/ha of water
 - » Do NOT spray to run-off
- Rate: Apply Arsenal® Powerline at 3.0 to 4.6 L/ha
 - » Tank mix with a non-ionic surfactant at 0.25% v/v
- Do not enter treated areas until spray has dried
- No visual symptoms in year of application; treated plants will not regrow the following year
- High density infestations may require supplemental treatments in subsequent years
